

I feel that the FCC must reject NAB's petition 04-160. XM provides services that I am willing to pay for and there is no alternative to consistent, accurate, and local traffic conditions. I need to have reports when I travel and do not want to schedule my travel around waiting for reports at certain times per day. Miss one AM radio report and it could be 20 minutes until a report gets heard. With XM a report is one minute away. I support XM satellite radio and pay for these services. Technology must move forward.
